

Made in Europe Certification

From the very beginning of its founding, AISLER has strived to make European manufacturing competitive. By using a high degree of automation and clever processes, AISLER is easy-to-use, very approachable, and affordable. We hereby certify the following manufacturing standards:

Printed Circuit Boards

We guarantee that the end processing and manufacturing of our bare printed circuit boards takes place 100% in Europe. By collaborating exclusively with locally certified manufacturing partners, we ensure industrial-grade quality whilst eliminating customs hurdles and minimising transit times.

Assembled Printed Circuit Boards

For our electronics assembly services, we guarantee a strictly European value chain for both the bare board and the manufacturing process:

- **Manufacturing and Assembly:** The production of the PCB and the assembly process are conducted entirely within Europe.
- **Component Traceability:** To provide maximum transparency for your supply chain, we verify the origin of every electronic component. Upon request, we can supply the exact Country of Origin for the complete Bill of Materials.

The following companies operate under this **Made in Europe Certification**:

- AISLER BV, Schoolstraat 2, 6295 AV Lemiers, The Netherlands
- AISLER Germany GmbH, Philipsstr. 8, 52068 Aachen, Germany

In need something more specific to your project, kindly contact us at compliance@aisler.net.
